To: Vendors for project: Request for Plainfield School District 202 Wireless Network Infrastructure  
From: Russell Moore, Sr. Network Administrator  
Date: March 1, 2018  

The RFP documents incorrectly describe the districts switches as providing 802.3af (15 watt or POE) power on every port. The districts switches do in fact provide 802.3at (30 watt or POE+) power on every port. There is a power budget limit on the switches of about 700 watts. The district will provide or reconfigure switches as necessary if the power budget would be exceeded.
